SKILLS

- **Programming Languages:** Python, Java, JavaScript
- **Web Development:** HTML, CSS, React.js, Express.js, Node.js, Tailwind CSS
- **AI/Agentic Tools:** LangChain, AutoGen
- **Databases:** MySQL, MongoDB
- **Soft Skills:** Leadership, Problem-Solving Skills, Project Management, Adaptability

PROJECTS

- **EchoChat (Full-Stack Real-Time Web Application): (July 2026-August 2026):** Built a full-stack real-time chat application that lets users message each other instantly across desktop without the overhead of heavier messaging platforms. Used Socket.io alongside Express.js to handle bi-directional, event-driven communication, so messages appear across active sessions with minimal delay. Secured user accounts with JWT-based authentication and bcrypt password hashing, covering registration, login, and persistent sessions. Modeled a MongoDB schema through Mongoose to store and retrieve chat histories and user profiles reliably. Leveraged WebSockets instead of HTTP polling, reducing message delivery latency down to real-time speeds during active conversations. Integrated centralized Express error-handling middleware and explicit client-side try/catch handling to gracefully surface connection failures to the user.
- **AI Travel Planner (March 2026-June 2026):** Built a full-stack AI travel planning web app that generates custom day-by-day itineraries from a destination, budget, and travel date range, covering attractions, restaurants, and activities. Engineered structured prompts for the Google Gemini API to return itinerary data in a consistent JSON format, then parsed and rendered it dynamically into day-wise itinerary cards on the frontend. Built a multi-step trip-input form in React with client-side validation, animating step transitions and itinerary reveal with Framer Motion for a smoother UX. Routed Unsplash and OpenWeatherMap API calls through Next.js serverless API routes to keep API keys server-side, pairing destination images with live weather forecasts for each itinerary on a responsive, Tailwind-built layout.
- **GenAI Commercial Analytics Engine (May 2025-July 2025):** Built an end-to-end commercial analytics platform combining Generative AI and relational databases, accessed through a chatbot-style QA interface, to streamline decision-making for business stakeholders. Automated Text-to-SQL conversion using Google Gemini models, letting stakeholders ask commercial questions in plain English and get SQL-backed answers instantly, without writing queries or waiting on a data team. Built a database-agnostic connection layer with schema-aware prompting, so the same natural language interface generated correct SQL across different relational database backends. Returned results as natural-language summaries alongside the raw data, turning outputs like revenue trends and top customers into insights non-technical stakeholders could act on directly.

EXPERIENCE

Training and Industrial Exposure [Nov, 2025]—

- **Agentic AI Trainee — Cranes Varsity, Bangalore:** Gained hands-on experience in the end-to-end ML model life-cycle, including data preprocessing, model building, and validation using Python, Scikit-Learn, and TensorFlow/PyTorch.

EDUCATION

- | | |
|---|-------------------------------|
| • Vellore Institute of Technology (VIT) , Bhopal | Bhopal, Madhya Pradesh |
| • <i>B.Tech in Computer Science , CGPA: 8.21</i> | <i>July, 2023 – May, 2027</i> |

CERTIFICATIONS

- **Software Engineer Intern:** HackerRank
- **Full Stack Web Development - Skill Up:** GeeksForGeeks
- **TCS iON Career Edge - Young Professional:** TCS iON
- **The Bits and Bytes of Computer Networking :** Coursera
- **Machine Learning:** NPTEL
